Message:

About 3/4 done with the rebuild. Need new bunker from Torry, should be here later this week, need some detail parts from Ozark and Trackside Details, they should be here soon.

I have the front lanp ready to light , LED and wiring through the handrails is ready, battery will go in bunker.

Added many detailed parts.

Here is a shot of the rear, details are all but finished

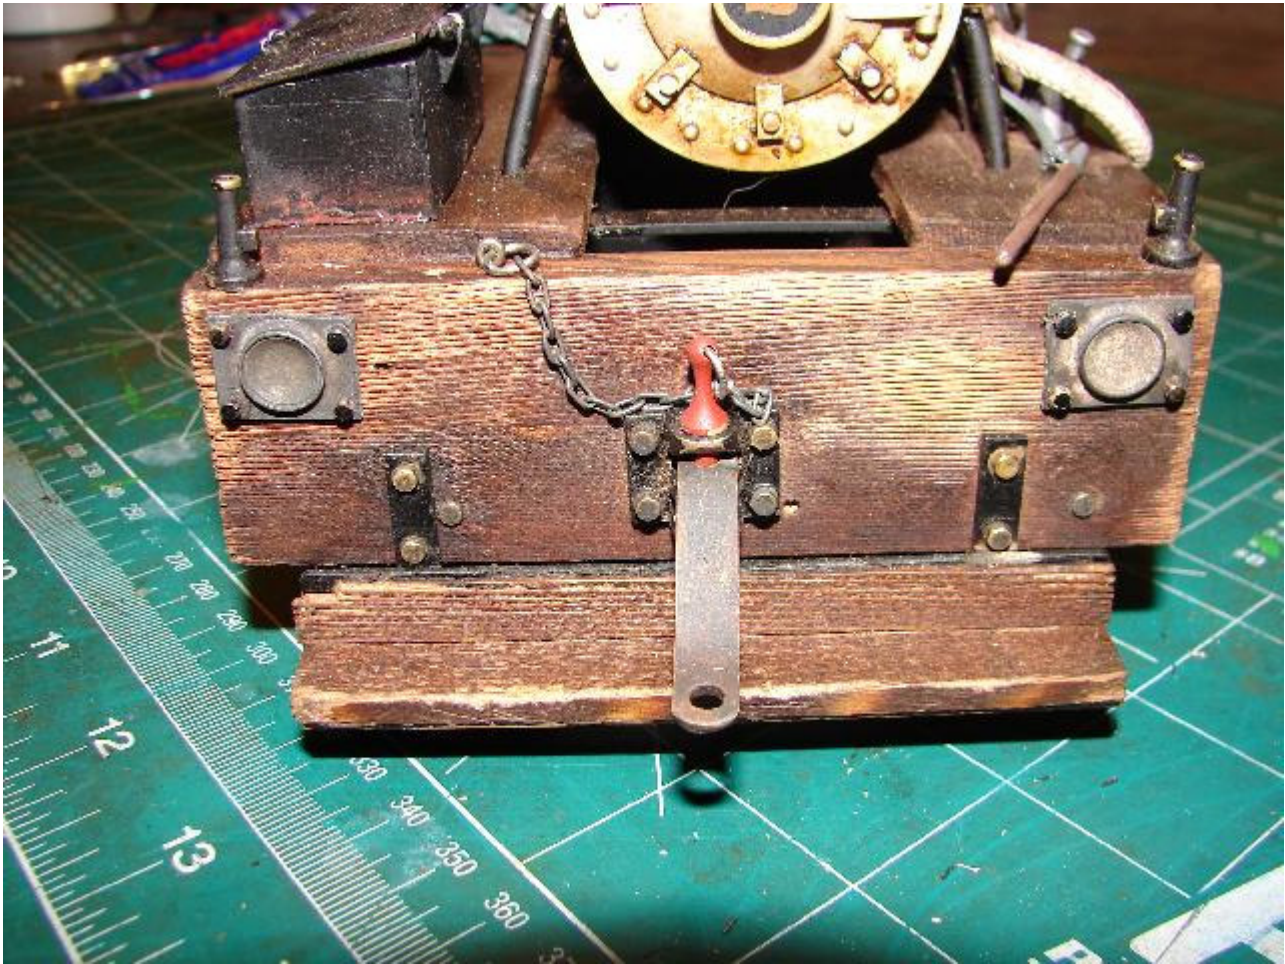

Some details were added on working engine side

Waiting on air pump and air tank to finish it up, at the top you can just see the hand rail 3/32 pipe with magnet wire inside for the front headlamp LED

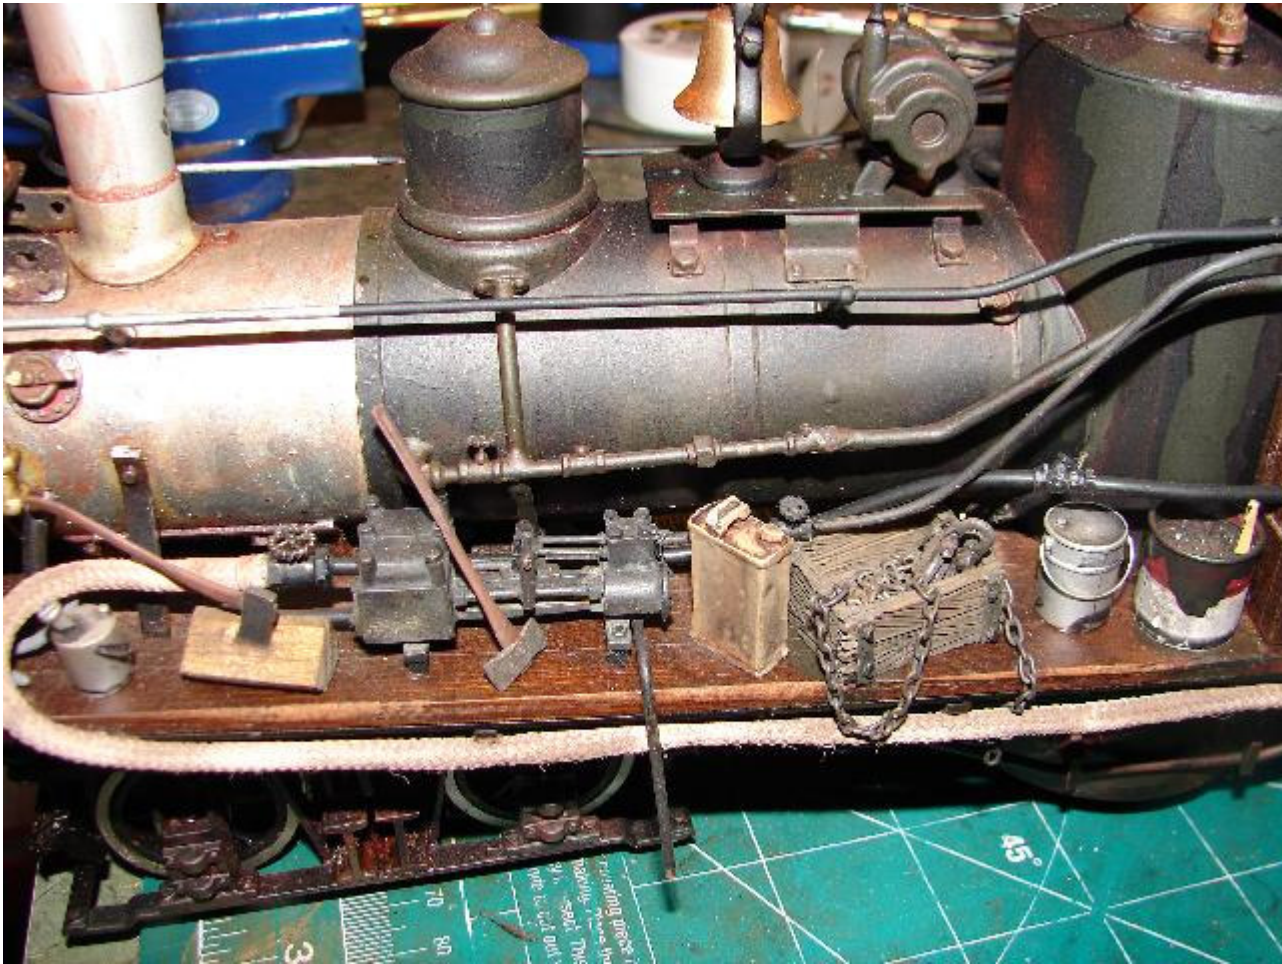

I am going to add some details to the front, but I have to leave room to open the smokebox, since this is a live steamer. I have an idea on how, maybe tonight I get started on it...

The other side has a steam driven punp for the siphon hose

I hope to finish it up for the ECLSTS where I will display it Royce's table, run it on Mike Moore's layout, maybe at the MLS booth also

Jon
